WILLS'S CIGARETTES

Hydraulic Press.

To Joseph Bramah and Henry Maudslay belongs the credit of the invention of the Hydraulic Press. Wherever an enormous sustained effort is required for lifting heavy loads, bending steel plates, or compressing metal, &c., hydraulic power is almost indispensable. The huge press shown is used for consolidating steel ingots for armour plating. It is 33 feet in height, weighs 1,280 tons, and exerts a pressure of 12,000 tons.
